

CLAIMS

What is claimed is:

1. A pump assembly comprising:

a main body having an anterior end, a posterior end, and an interior chamber;

5 an intake conduit, said intake conduit fluidly coupled to said anterior end and an outlet conduit fluidly coupled to said interior chamber;

a first valve means for selectively allowing fluid flow from said intake conduit to said interior chamber, a second valve means for selectively allowing fluid flow from said interior chamber into and through said drainage conduit;

10 fluid displacement means for causing fluid flow through said main body, said fluid displacement means having an elastic main body biased in an expanded state;

whereby external pressure fluctuations cause deflection and/or expansion of the elastic main body.
